

Natural Stone Elegance:
Rock the Roof with Harvey TuffSpan®

For professionals seeking the clean lines of corrugated sheeting without the glare, noise or ongoing repainting of conventional metal roofs, Harvey TuffSpan® offers a compelling architectural upgrade. Combining a classic corrugated steel profile with Harvey's signature natural stone-coated finish, TuffSpan is engineered to withstand demanding Southern African climates while elevating residential, commercial and industrial designs.

Never Fade, Never Paint
At the core of TuffSpan's appeal is its never-paint, never-fade durability. Unlike painted roof sheets that peel, chalk or lose vibrancy under intense UV exposure, TuffSpan is coated in uncoloured natural stone granules. The colour is inherent to the stone itself, eliminating lifetime repainting costs while delivering a refined, matte aesthetic with zero harsh solar glare.

Quiet & Cool
Beyond visual appeal, the textured stone layer provides tangible acoustic and thermal comfort. By absorbing sound energy rather than reverberating, TuffSpan significantly reduces rain and hail noise, creating noticeably quieter interiors during rainstorms. Simultaneously, its matte finish naturally diffuses heat under the African sun.

Unique & Versatile
From a structural and installation perspective, TuffSpan delivers an exceptional strength-to-weight ratio. Weighing approximately 12 kg to 14 kg per sheet depending on profile and length, it reduces dead load on roof trusses, simplifies handling, and lowers structural timber requirements. Suitable for roof pitches as low as 10°, it is equally effective for contemporary new builds, re-roofing upgrades and converting natural thatch roofs into sleek, fire-safe, low-maintenance spaces.

Four Natural Colours
Available in four architectural colours, Midnight Black, Greystone, Dark Brown, and Light Brown, alongside matching roll-top ridges and barge board covers for a seamless finish, Harvey TuffSpan® is available to order directly from Harvey Roofing Products.
