

PROJECT 5

REPLACE A DOOR LOCK

YOU'LL NEED

Door lock, screws, claw hammer, two screwdrivers, wood chisel

STEP 1

Unscrew and remove the handle on one side of the door. Remove the pin in the middle.

STEP 2

Take out the screws on the old lock and carefully remove the mechanism. You might need a chisel or flat screwdriver to manoeuvre it out if it's stuck.

Prints of Paris and New York R470 each, @home. Red vase R28, Kenly.

STEP 3

Insert the new lock in the same opening. If it won't fit use the hammer and wood chisel to chip away the recess in the wood until the lock slides in easily. Fasten the screws. Insert the pin in the lock mechanism and screw on the handle removed in Step 1.
