

Install down lights

PROJECT 8

You'll need

Down light, bulb, pencil, hole cutter, electric drill, electric screwdriver

STEP 1

An electrician should do the wiring but you can do the installation. Read the instruction leaflet that comes with the down lights. Decide how many down lights you need in the room and where. Mark and drill holes in the ceiling with the hole cutter on the electric drill. The size of hole depends on the type of down lights you choose.

STEP 2

After the electrician has installed the wiring, use the screwdriver to connect the electric wire. Follow the instructions on the leaflet.

STEP 3

Install the fitting, using the surdip provided, and connect the bulb.

TIP:

SPACE THE LIGHTS ABOUT 2 METRES APART TO GET GOOD OVERALL ILLUMINATION.
